Real Use Case

A street entrepreneur in Hyderabad wants to open a tea and snacks stall near a college campus with a budget of ₹30,000. By dropping a pin on the map, LOCUS AI instantly scans nearby competitors, foot traffic patterns, and student density across 0–300 m, 300 m–2 km, and 2–5 km bands — revealing whether the location is worth the investment before a single rupee is spent.

How LOCUS AI Works

01/ Define Your Business

Enter your business idea, budget, format, and target customers to get started.

02/ Analyze the Market

Explore nearby competitors, foot traffic signals, and commercial activity across distance bands.

03/ Pin Your Location

Select a target location on the map and drop a candidate pin to begin analysis.

04/ Assess & Decide

Review the location intelligence report and decide if the spot is worth your investment.

Market Setup

Configure business profile and target location.

Business Profile & Budget

Edit All Fields

Describe your business idea *

e.g. Small tea and snacks stall near a college with ₹30,000, mainly serving students

Interpret with Rules

Rule-based analyzer (no LLM)

SAMPLE EXAMPLES (OPTIONAL):

Tea & Snacks Stall (₹30,000)

Stationery & Xerox Shop (₹50,000)

Specialty Café (₹15L)

Quick Service Restaurant (₹25L)

Available Budget (INR) *

Enter your available budget in

Total available capital. Distinguishes small (e.g. ₹20k-₹50k) from large outlets.

Location Intelligence

LOCUSAI aggregates local market signals—competitor density, foot traffic patterns, commercial activity, and customer suitability — across three distance bands around your chosen outlet. Each signal is weighted and combined into a clear location score, giving small business owners the evidence they need to make a confident go/no-go decision before committing a single rupee to rent or setup costs.

OPTIONAL GROUND ENHANCEMENT

Want to add more detail? Upload a short street video to supplement the map-based assessment with live visual storefronts and activity signals.

- Continue with Map-Based Analysis
- Enhance with Street Scan

Upload Street Video

Supported: MP4 / MOV · 30-60 sec recommended

Run Calibrated Demo Scan (Labeled Sample Telemetry)

Video & Keyframe Preview

No street footage loaded yet.

Frames are extracted in-browser at ~1 FPS (640px max width).

PROCESSING STATUS 0%

Street Scan – Ground-Level Validation

- Upload 30–60 second street videos.
- Detect people, vehicles, seating, and storefronts.
- Extract business information from visible signboards.
- Remove duplicate observations across video frames.
- Fuse observed evidence with existing location data.

Video & Keyframe Preview

No street footage loaded yet.

Frames are extracted in-browser at ~1 FPS (640px max width).

PROCESSING STATUS 0%

- Uploading

Validating MP4/MOV video stream
- Extracting frames

~1 FPS downsampled keyframe sampling
- Detecting objects

COCO object detection (person, vehicles, seating)
- Reading signs

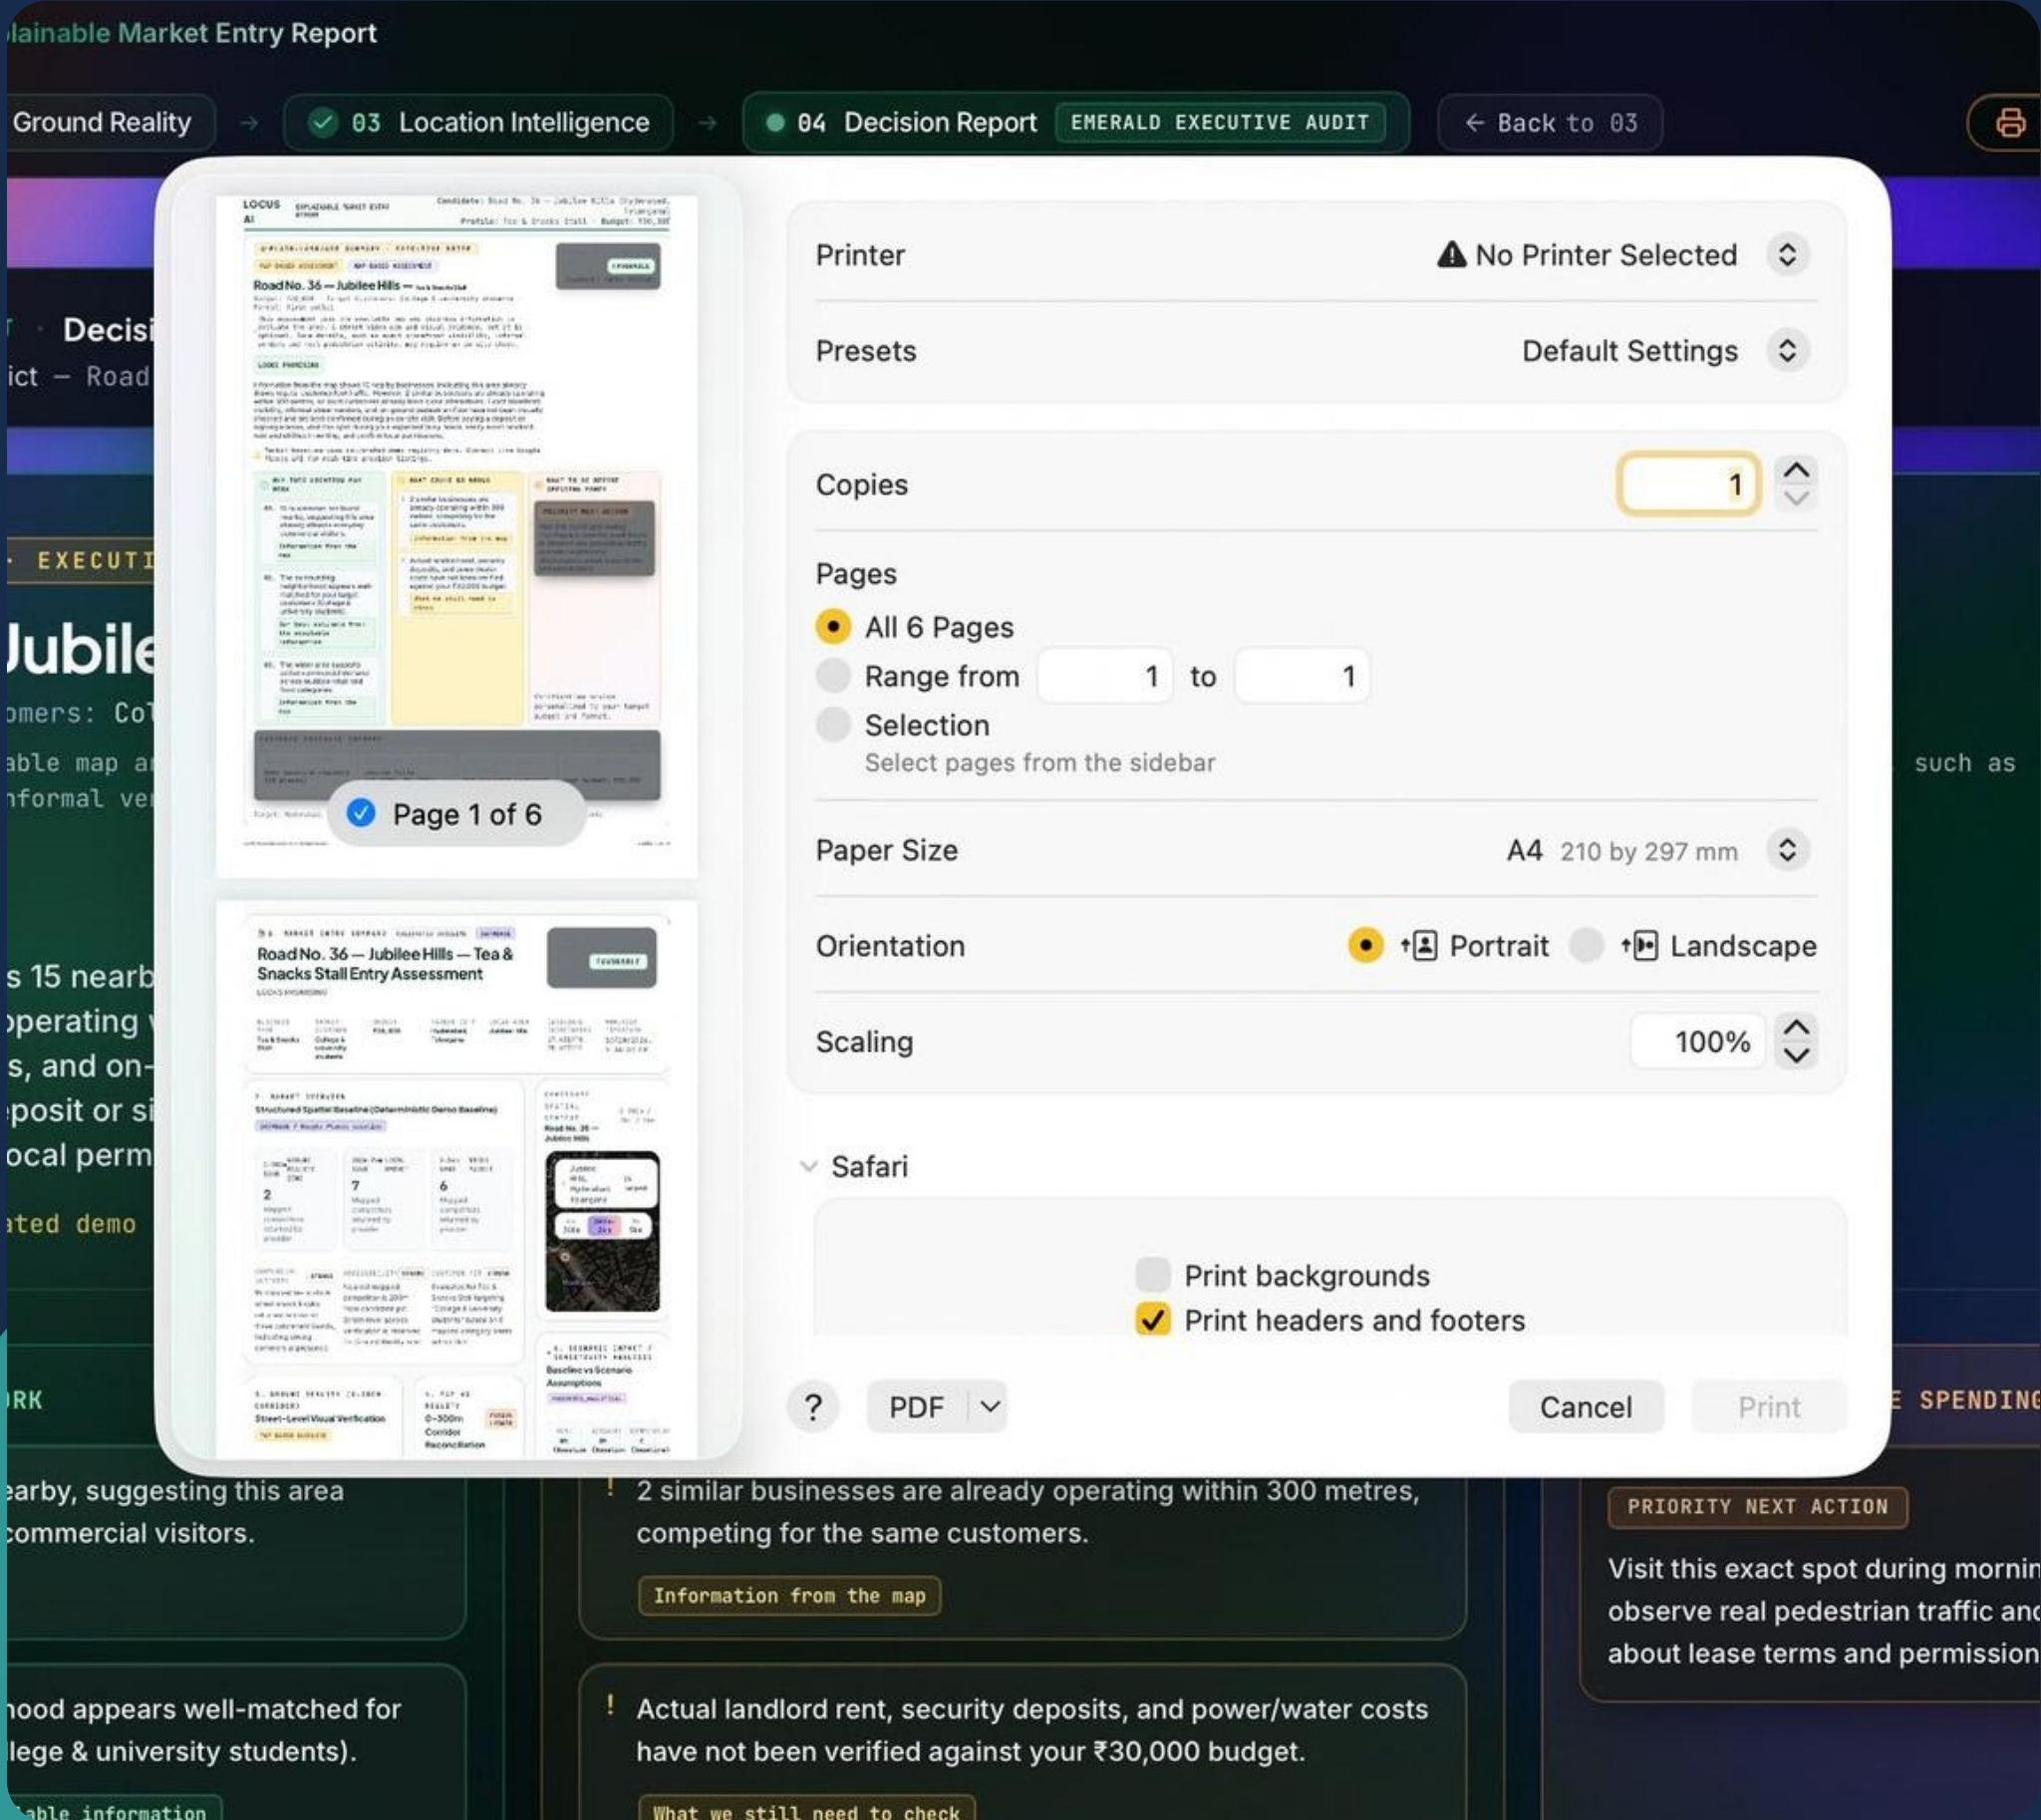

Selective OCR on top 5-8 sharpest keyframes
- Deduplicating

Temporal multi-frame storefront consolidation
- Fusing evidence

0-300m DATABASE baseline vs OBSERVED scan

Upload a 30-60s street clip (MP4/MOV) or run the calibrated demo scan.

Normalized frame observations sent to `/api/street-scan/fuse` (no raw video buffers transmitted).

Decision Report

LOCUSAI generates an explainable market entry report to help small-business owners make informed location decisions before investing money. The report evaluates nearby businesses, competitor density, target customer suitability, commercial activity, and available location evidence. It highlights potential advantages, identifies risks, and provides practical recommendations before committing to a location.
